MAAZ SHAHEEN

Python Backend Engineer | FastAPI Developer

Lahore, Pakistan · Open to junior backend roles (Lahore on-site/hybrid or remote) · +92 334 1057295 · maazshaheen5566@gmail.com
Portfolio: maazshaheen.tech · GitHub: github.com/MAAZSHAHEEN · LinkedIn: linkedin.com/in/maaz-shaheen-772b061b8

SUMMARY

Python backend engineer and Computer Science graduate (UET Mardan, 2025) building FastAPI and PostgreSQL services: async SQLAlchemy, Alembic migrations, JWT authentication with server-side permission checks, Docker and CI. Deployed RideShare v1 on AWS EC2 behind Nginx and v2 on FastAPI Cloud. Also builds LLM features with Google Gemini and is competing in Kaggle's Gemma 4 coding-agent competition.

PROJECTS

RideShare API v2 — Solo project · v2 in development

Python · FastAPI · PostgreSQL · SQLAlchemy (async) · Alembic · JWT · bcrypt · Redis · Docker · GitHub Actions · FastAPI Cloud

- A ride-sharing backend connecting drivers and passengers: drivers publish seats, passengers request them, drivers accept, decline, complete or cancel. One account can act as passenger and driver, with permissions enforced by a shared server-side capability policy.
- Row-level locking (SELECT … FOR UPDATE) in a fixed lock order serializes accept, cancel and complete so seat counts stay correct under concurrent requests; a unique partial index blocks duplicate active bookings (HTTP 409).
- v2 (rideshare-v2 branch): 194 tests passing in GitHub Actions CI against real PostgreSQL 15, including concurrency races, migration upgrade/downgrade and JWT tampering. v1 (main branch) was deployed on AWS EC2 behind Nginx; v2 runs on FastAPI Cloud.

Gemma 4 Coding Agent — Kaggle competition work · 2026

Python · Gemma 4 31B · Google Agent Development Kit · Kaggle Notebooks

- Autonomous agent that works through Python coding tasks without human input, within the free weekly Kaggle GPU quota.
- Experiment-driven: logged and compared every change on the official scorer; main track best public leaderboard score 0.20 (submission S006), up from 0.06 on the first of six submissions.
- Paper track: submitted a write-up, "When Thinking Helps—and Hurts", on Oct 28, 2026.

Case study · Kaggle profile

HireLoop AI — Personal product · built with Bolt + Supabase

React · TypeScript · Supabase (Postgres, Auth, Row Level Security, Edge Functions) · Google Gemini API · Bolt.new

- AI career workspace: resume analysis, job matching, tailored drafts, a Kanban application tracker and AI coaching. Built using Bolt.new and Supabase, with AI-assisted code generation. Submitted to Bolt Builders Week 2026.
- Gemini calls run in an authenticated Supabase Edge Function with JSON response schemas and user-safe errors; a code check rejects drafts that claim employment at the target company. My role: product requirements and MVP scope, testing live builds, release approvals and the submission.

Case study · Live app · Demo video

AI Python Repair API — prototype — 2026

FastAPI + Google Gemini proposes a fix for a Python file; ast.parse validates the syntax and invalid fixes are retried up to 3 times. Early prototype, no tests; not safe to expose publicly (its /fix endpoint reads and overwrites client-supplied file paths, no auth). Code

TECHNICAL SKILLS

Backend & APIs: Python, FastAPI, Pydantic, Async I/O, REST API design, SQLAlchemy (async), Alembic, JWT authentication, server-side authorization

Data: PostgreSQL, SQL, Redis, Supabase

Testing: unittest, pytest, PostgreSQL integration tests, GitHub Actions CI

DevOps: Docker, Docker Compose, GitHub Actions, AWS EC2, Nginx, FastAPI Cloud, Uvicorn, Linux, Git

AI: Google Gemini API, Gemma 4, Google ADK, agentic workflows

Frontend & tools: React, TypeScript, uv, Ruff

EDUCATION

Bachelor of Science in Computer Science (BSCS) | UET Mardan — 2021 – 2025
